EDUCATION

B.Tech, Computer Science & Engineering — CHARUSAT Jan 2022 – May 2025
CGPA 8.08

Diploma, Computer Engineering — Marwadi University 2019 – 2022
CGPA 9.09

EXPERIENCE

Software Developer — OrgLance Technologies LLP Dec 2024 – Present
Ahmedabad · Intern Dec 2024 – May 2025, full-time since May 2025

- Build user-facing features in React and React Native for two production products, AutomationHQ (test automation) and SnowCare (hospital management), across web, desktop (Electron) and mobile clients.
- Develop backend services in Java / Spring Boot with MongoDB; set up Apache Kafka for messaging between services, including creating and configuring topics.
- Build React + Node.js + MySQL applications; work with FHIR-based healthcare data and the analytics layer built on top of it.

Summer Intern — ThemeMakker Jun – Jul 2024
Website development · Remote

Summer Intern — Prolog Infotech Jun – Jul 2023
Web development · Remote

PROJECTS — each is live and has an automated end-to-end test suite

BillBook — GST billing & CRM (full-stack) viralgautami.github.io/apps/billbook

- Prevented duplicate invoice numbers and tampered totals by moving GST maths (integer paise; invariant checked on 5,000 random invoices), numbering and role checks into a Node.js / Express + SQLite API with JWT auth; 29 API tests and 28 browser-to-database checks, including 25 parallel requests producing 25 unique numbers. React, TypeScript.

PassDesk — event ticketing & QR entry viralgautami.github.io/apps/passdesk

- Designed a ticket gate that verifies ECDSA P-256 signed QR tickets with only a public key (Web Crypto), so a forged ticket (edited type, old signature) is rejected; 25 automated checks cover forged, duplicate, wrong-event and cancelled tickets, quotas and roles. React, TypeScript.

TableTap — restaurant QR ordering & kitchen display viralgautami.github.io/apps/tabletap

- Synced orders live between the customer's phone and the kitchen screen without a server, using the browser storage event; 30 checks driven through two tabs cover the full order lifecycle and CGST / SGST billing to the paisa. React, TypeScript.

StockLine — inventory & barcode stock control (PWA) viralgautami.github.io/apps/stockline

- Made the app reopen and work with the network off using a service worker, verified by a forced-offline reload in 24 automated checks; added camera barcode scanning and reorder reports. React, TypeScript.

FeeBook — fee collection for tuition classes viralgautami.github.io/apps/feebook

- Applied part-payments to the oldest month first and derived every balance from receipts; 26 checks verify all totals against an independent recomputation, with gap-free receipt numbers and WhatsApp reminders. React, TypeScript.

Spider Bug Tracker (open source) github.com/viralgautami/spider-bug-tracker

- Built a MERN bug tracker with admin / developer roles, project leads, bug assignment, in-bug discussion and developer dashboards. React, Redux Toolkit, Material-UI, Node.js, Express, MongoDB, JWT.

SKILLS

Languages	TypeScript, JavaScript, Java, SQL, HTML/CSS
Frontend	React, Next.js, Angular, Tailwind CSS, Bootstrap
Backend & data	Java (Spring Boot), Node.js, Express, REST, Apache Kafka, MongoDB, MySQL, SQLite, JWT
Mobile & desktop	React Native, Electron, browser extensions, PWA, Web Crypto
Tools	Docker, Git, Cloudflare, virtualization (HPE ProLiant), NocoDB, Vite
